PROFESSIONAL SUMMARY

Artificial Intelligence undergraduate focused on Machine Learning, Deep Learning, Natural Language Processing, and Data Science. Experienced in developing project-based solutions using Python, including sentiment analysis, RAG systems, predictive modeling, and exploratory data analysis.

EDUCATION

Bachelor of Artificial Intelligence

2023 – Present

University of Management and Technology (UMT), Sialkot

Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Data Science, Data Structures & Algorithms

TECHNICAL SKILLS

Programming

Python SQL

Deep Learning

Deep Learning TensorFlow Artificial Neural Networks

Data Science

Pandas NumPy Matplotlib Seaborn Data Analysis

Machine Learning

Machine Learning Scikit-learn Predictive Modeling

NLP

NLP NLTK Hugging Face Transformers RAG

Tools & Deployment

Jupyter Git GitHub Streamlit

SELECTED PROJECTS

Sentiment Analysis System

🐙 GitHub

🔗 Live Demo

Python • Scikit-learn • TF-IDF • NLP • Streamlit

- Developed a three-class sentiment analysis system for social media text using NLP preprocessing and TF-IDF feature extraction.
- Compared Logistic Regression and Multinomial Naive Bayes, selecting Logistic Regression based on validation performance.
- Deployed the trained model with Streamlit for real-time sentiment prediction.

E-commerce Sales & Profitability Analysis

🐙 GitHub

Python • Pandas • NumPy • Matplotlib • Seaborn

- Performed data cleaning, feature engineering, and exploratory analysis on transaction-level e-commerce data.
- Analyzed sales trends, product performance, customer behavior, regional performance, and profitability.
- Created analytical visualizations using Pandas, NumPy, Matplotlib, and Seaborn to identify business patterns.

Document-Based RAG System

- Developed a Retrieval-Augmented Generation system for querying domain-specific IT documents through natural language.
- Applied NLP and retrieval techniques to provide context-based responses from relevant document content.

CliniFuse: Sepsis Prediction

- Developed a predictive modeling project focused on identifying sepsis risk from clinical data.
- Applied machine learning techniques to support early risk prediction from patient-related features.
